In contrast, white has a light reflectance value of 100% and keeps a building light and cool. All colours fit within these two extremes. A Resene CoolColour™ is	that a colour will reflect. Black has a light reflectance value of 0% and absorbs all light. The surfaces are consequently very dark and can get very hot. In contrast, white has a light reflectance value of 100% and keeps a building light and cool. All colours fit within these two extremes. A Resene CoolColour ³¹ is	that a colour will reflect. Black has a light reflectance value of 0% and absorbs all light. The surfaces are consequently very dark and can get very hot. In contrast, white has a light reflectance value of 100% and keeps a building light and cool. All colours fit within these two extremes. A Resene CoolColour ^M is	that a colour will reflect. Black has a light reflectance value of 0% and absorbs all light. The surface are consequently very dark and can get very hot. In contrast, white has a light reflectance value of 10% and keens a building light and cool, All colours fit within these two extremes. A Resene CoolColour ^{MI}	that a colour will reflect. Black has a light reflectance value of 0% and absorbs all light. The sur 0% are consequently very dark and can get very hot. In contrast, white has a light reflectance value of 1 and keeps a building light and cool. All colours fit within these two extremes. A Resene CoolColou	but light surfaces follow will reflect ance value (LRV) of a colour indicates the amount of visible light surfaces follow will reflect. Black has a light reflectance value of 0% and absorbs all light. The surfaces are consequently very dark and can get very hot. In contrast, white has a light reflectance value of 10% and keeps a building light and cool. All colours fit within these two extremes. A Resene CoolColour [™] is	that a colour will reflect. Black has a light reflectance value of 0% and absorbs all light. The sur are consequently very dark and can get very hot. In contrast, white has a light reflectance value of 1 and keens a building light and cool. All colours fit within these two extremes. A Resene CoolColou	aces that a colour will reflect. Black has a light reflectance value of 0% and absorbs all light. The surfaces are consequently very dark and can get very hot. In contrast, white has a light reflectance value of 100 m	that a colour will reflect. Black has a light reflectance value of 0% and absorbs all light. The surface the are consequently very dark and can get very hot. In contrast, white has a light reflectance value of 100% and keeps a building light and cool. All colours fit within these two extremes. A Resene CoolColour [™] is	5 that a colour will reflect. Black has a light reflectance value of 0% and absorbs all light. The surfaces of are consequently very dark and can get very hot. In contrast, white has a light reflectance value of 100% and keeps a building light and cool. All colours fit within these two extremes. A Resene CoolColour™ is	that a colour will reflect. Black has a light reflectance value of 0% and absorbs all light. The surfa are consequently very dark and can get very hot. In contrast, white has a light reflectance value of 10 and keeps a building light and cool. All colours fit within these two extremes. A Resene CoolColour
formulated to reflect more of the sun's energy, improving the colour's heat and total solar reflectance (TSR) properties compared to a normal colour, keeping the coating, substrate and building cooler. Note 2: Mid to dark colours are not suitable for some exterior substrates and if used may cause damage	in keeps a building light and color. All colors in which the colour's heat and total solar reflectance from the sun's energy, improving the colour's heat and total solar reflectance (FSR) properties compared to a normal colour, keeping the coating, substrate and building cooler. 15(8) properties compared to a normal colour, keeping the coating, substrate and building cooler. 15(8) properties compared to a normal colour, keeping the coating, substrate and building cooler.	formulated to reflect more of the sun's energy, improving the colour's heat and total solar reflectance (TSR) properties compared to a normal colour, keeping the coating, substrate and building cooler. Note 2: Mid to dark colours are not suitable for some exterior substrates and if used may cause damage	formulated to reflect more of the sun's energy, improving the colour's heat and total solar reflectance (TSR) properties compared to a normal colour, keeping the coating, substrate and building cooler. Note 2: Mid to dark colours are not suitable for some exterior substrates and if used may cause damage to the substrate, such as warping, checking and premature failure. Always check with the substrate suitable of the substrate, such as warping, checking and premature failure. Always check with the substrate supplier prior to commencing any work to ensure colour selections fit within their guidelines. Resene also manufactures Resene Coolcolour technology and this may increase the colour range that can be suitable over some heat sensitive substrates – refer Resene for further information. Note 3: Tones listed above are subject to change if colours are reformulated. Note 4: Colours may be available in selected products or sizes only. Check with Resene ColorShop or Reseller staff to ensure your selected colour is available in the product and/or size you require.
